

Transform Your Ride with Tuffride's Coil-to-Air Suspension

Why More Caravan & Toy Hauler Owners Are Switching to Air Suspension

Every caravan owner knows the feeling of rough roads, sagging suspension under load, uncomfortable towing, and the constant compromise between comfort and carrying capacity.

That's why more travellers are upgrading from traditional coil suspension to Tuffride's Coil to Air system.

Whether you're towing a luxury caravan, toy hauler, camper trailer, or off-road rig, air suspension delivers a smoother, safer, and more controlled towing experience.

The Benefits of transforming from Coil to Air Suspension

Improved Ride Comfort

Air suspension absorbs bumps and road imperfections far better than traditional coil springs.

The result?

- Less vibration through the caravan
- Reduced shock loads on your belongings
- A smoother towing experience for driver and passengers
- Better protection for appliances, electronics, and cabinetry

Perfect for long-distance touring and rough Australian roads.

Adjustable Ride Height

One of the biggest advantages of air suspension is the ability to adjust ride height depending on your load and terrain.

Benefits include:

- Level your caravan or toy hauler when loaded
- Improve towing stability
- Increase clearance for rough tracks or driveways
- Lower the vehicle for easier access and loading

No more rear sag or uneven ride height.

Better Load Handling

Traditional coil springs are designed for an average load. But caravans and toy haulers rarely stay at the same weight.

Air suspension adapts to changing loads, helping:

- Maintain correct ride height
- Improve weight distribution
- Reduce suspension strain
- Enhance towing confidence

Ideal for customers carrying:

- Motorbikes
- Side-by-sides
- Water tanks
- Extra gear
- Touring equipment

Increased Stability & Control

Air suspension helps keep the caravan more stable during towing, especially in:

- Crosswinds
- Uneven road surfaces
- Corrugated roads
- Emergency manoeuvres

This can significantly improve driver confidence and reduce trailer sway.

Protect Your Investment

Harsh impacts and suspension movement can damage:

- Internal cabinetry
- Fridges and appliances
- Electronics
- Plumbing systems
- Chassis components

Tuffride Coil to Air suspension helps reduce shock transfer throughout the caravan, helping extend the life of your setup.

Off-Road Capability

For off-road caravans and toy haulers, air suspension offers improved articulation and adaptability over varying terrain.

Benefits include:

- Better ground clearance
- Improved wheel movement
- Reduced harshness on corrugations
- Greater control off-road

Built for Australian touring conditions.

Future-Proof Your Caravan

As your touring setup changes, air suspension can adapt with it.

Whether you:

- Add accessories
- Upgrade batteries
- Carry more water
- Increase payload
- Change towing requirements

Your suspension system remains flexible and capable.

Why Choose Tuffride?

Already running Tuffride suspension on your caravan or toy hauler?

The good news is that many existing Tuffride coil suspension systems can be upgraded to a Coil to Air setup without replacing the entire suspension system.
